

LUTE Technologies AG and AERTiCKET AG offer Lufthansa Preferred Rates in familiar GDS environment

Berlin, xx.01.2009

Right in time for the discontinuation of the Lufthansa Preferred Rates in Amadeus, LUTE Technologies AG announces the first offering of a truly Multi GDS Fronted (LUTE CommandPRO_{sm}) that allows flight bookings in various reservation systems. Aerticket offers LUTE CommandPRO_{sm} via an exclusive link to their customers over the AERTicket extranet.

The travel agent uses his traditional entries while the system translates these entries into an appropriate different GDS format and returns outputs again in the originating format. Not only flight bookings but also rebookings and cancellations are supported.

LUTE CommandPRO_{sm} is available to all customers for Aerticket from February 1st 2009. Via the integrated Extranet-Assistant, tickets can be ordered the usual and comfortable way. Even the data transfer to a local mid-office system is possible. Aerticket will transfer the GDS records to the different providers for further processing at time of booking.

There will be no cost for an additional GDS nor will there be any time effort for additional training. The use of LUTE CommandPRO_{sm} will be free of charge via the Aerticket extranet. Additional GDS connections will be implemented the same way in the future so the availability of the Preferred Rates is secured for the future.

Aerticket AG is the leading consolidator in Germany and Europe. The majority ownership is held since 1993 by several independent travel agency chains and co-operations. Buying power, customer proximity and technical innovation are the strengths of the company. Subsidiaries like FlightOne, a fulfilment specialist, a fare filing company as well as several IT companies belong to Aerticket. More information: www.aerticket.de

LUTE Technologies AG based in Zug, Switzerland is a partner company of Farelogix, a leading provider for distribution and optimization technology to the global travel industry, based in Miami USA. While Farelogix will concentrate on developing the technology for travel suppliers and corporate Travel Management Companies, LUTE Technologies will focus on selling the technology to travel customers in the leisure segment and integrate market specific customizations. The product family will not only include a frontend solution but also a netfare database as well as direct access to several leading airlines.
